

Hi, I'm Pak-Bot!

Ask me anything! I use generative A.I. reporting to answer any question you can think of, the only limit is your imagination. I'm still learning so feel free to give me feedback that the team will use to train me.

Hi Archer, how can I help?

Currently I can answer questions about inventory, sales, orders, employees, supplier & customers, quality control, and yield. Give me your customers label designs and Producepak will be able to generate those labels instantly, no need to use the label designer !

I know which employees can access sales data. I also know which employees work at which site, so my answers will be filtered by sites.

I can email & print documents, labels, and generate instant ad hock reports at any time. Your imagination is the only limit!

Here are a few example prompts:

Email Angela Coles sales from Q1

Woolworths sales of baby spinach this year

Total sales last month

Sales by state last month

Total yellow potato in stock

Weight of totes in stock

Totals of inventory owned by ACE Farming Group

Total of inventory at site Closters

Walmart orders vs sales Q1 2026

Red onion in poly bags
